

# The 2007 Import and Export Market for Salts of Oxometallic or Peroxometallic Acid in South Korea

On the demand side, exporters and strategic planners focusing on salts of oxometallic or peroxometallic acid in South Korea face a number of questions. Which countries are supplying salts of oxometallic or peroxometallic acid to South Korea? How important is South Korea compared to others in terms of the entire global and regional market? How much do the imports of salts of oxometallic or peroxometallic acid vary from one country of origin to another in South Korea? On the supply side, South Korea also exports salts of oxometallic or peroxometallic acid. Which countries receive the most exports from South Korea? How are these exports concentrated across buyers? What is the value of these exports and which countries are the largest buyers? This report was created for strategic planners, international marketing executives and import/export managers who are concerned with the market for salts of oxometallic or peroxometallic acid in South Korea. With the globalization of this market, managers can no longer be contented with a local view. Nor can managers be contented with out-of-date statistics which appear several years after the fact. I have developed a methodology, based on macroeconomic and trade models, to estimate the market for salts of oxometallic or peroxometallic acid for those countries serving South Korea via exports, or supplying from South Korea via imports. It does so for the current year based on a variety of key historical indicators and econometric models. In what follows, Chapter 2 begins by summarizing where South Korea fits into the world market for imported and exported salts of oxometallic or peroxometallic acid. The total level of imports and exports on a worldwide basis, and those for South Korea in particular, is estimated using a model which aggregates across over 150 key country markets and

projects these to the current year. From there, each country represents a percent of the world market. This market is served from a number of competitive countries of origin. Based on both demand- and supply-side dynamics, market shares by country of origin are then calculated across each country market destination. These shares lead to a volume of import and export values for each country and are aggregated to regional and world totals. In doing so, we are able to obtain maximum likelihood estimates of both the value of each market and the share that South Korea is likely to receive this year. From these figures, rankings are calculated to allow managers to prioritize South Korea compared to other major country markets. In this way, all the figures provided in this report are forecasts that can be combined with internal information sources for strategic planning purposes.
