

The 2007 Import and Export Market for Motor Vehicles for Transport of Goods and Materials in Bulgaria

On the demand side, exporters and strategic planners focusing on motor vehicles for transport of goods and materials in Bulgaria face a number of questions. Which countries are supplying motor vehicles for transport of goods and materials to Bulgaria? How important is Bulgaria compared to others in terms of the entire global and regional market? How much do the imports of motor vehicles for transport of goods and materials vary from one country of origin to another in Bulgaria? On the supply side, Bulgaria also exports motor vehicles for transport of goods and materials. Which countries receive the most exports from Bulgaria? How are these exports concentrated across buyers? What is the value of these exports and which countries are the largest buyers? This report was created for strategic planners, international marketing executives and import/export managers who are concerned with the market for motor vehicles for transport of goods and materials in Bulgaria. With the globalization of this market, managers can no longer be contented with a local view. Nor can managers be contented with out-of-date statistics which appear several years after the fact. I have developed a methodology, based on macroeconomic and trade models, to estimate the market for motor vehicles for transport of goods and materials for those countries serving Bulgaria via exports, or supplying from Bulgaria via imports. It does so for the current year based on a variety of key historical indicators and econometric models. In what follows, Chapter 2 begins by summarizing where Bulgaria fits into the world market for imported and exported motor vehicles for transport of goods and materials. The total level of imports and exports on a worldwide basis, and those for Bulgaria in particular, is estimated using a model which aggregates across over 150 key country markets and

projects these to the current year. From there, each country represents a percent of the world market. This market is served from a number of competitive countries of origin. Based on both demand- and supply-side dynamics, market shares by country of origin are then calculated across each country market destination. These shares lead to a volume of import and export values for each country and are aggregated to regional and world totals. In doing so, we are able to obtain maximum likelihood estimates of both the value of each market and the share that Bulgaria is likely to receive this year. From these figures, rankings are calculated to allow managers to prioritize Bulgaria compared to other major country markets. In this way, all the figures provided in this report are forecasts that can be combined with internal information sources for strategic planning purposes.

Value Added Tax Act sector, import competition. Chemicals Export strength, significant raw Transport Equipment High debt oversupply in ships material base, low labor cost, (excluding Motor and lower marketing budgets Other Goods Solid investments in auto part facilities high FDI new auto plant to begin .
