

INNOVATIVE ECONOMICS

Many intelligent people have been making Indian economics and world economics grow. But we still find people everywhere struggling for money, job and comfort. The actual meaning of economics is to provide facility for the people in their daily life. This includes the facility that the government provides to the people in leading a comfortable life without too much stress for generating money to lead the life. The following are a variety of innovative ideas that the governments can follow to improve the welfare of the people. Personally, I think this is just the job to do and there are no such things as micro economics or macro economics. Even a layman would say, just do your job, to the rulers. Growth is a natural phenomenon and is an automatic process. Economics doesn't need loss accounts for development but a properly monitored corruption free system for a peaceful human life. The poor would just shout live and let us live to the corrupt people.
